Spacers GN 6226 are intended for use in hygienic areas. The versions with
sealing ring H und E comply additionally according to the guidelines of the
EHEDG and DGUV Test guidelines. The sealed mounting surfaces enable
fastening without dead spaces. The high quality finish prevents adherence of
dirt and facilitates cleaning.
Spacers are used to fasten parts at an offset parallel to their plane of

installation. This avoids doubling up on surfaces and leaves space for cleaning. The internal thread can alternatively be used as a through hole by a screw with a smaller thread.
